

A MOVIE RECOMMENDATION SERVICE

Movie Recommender

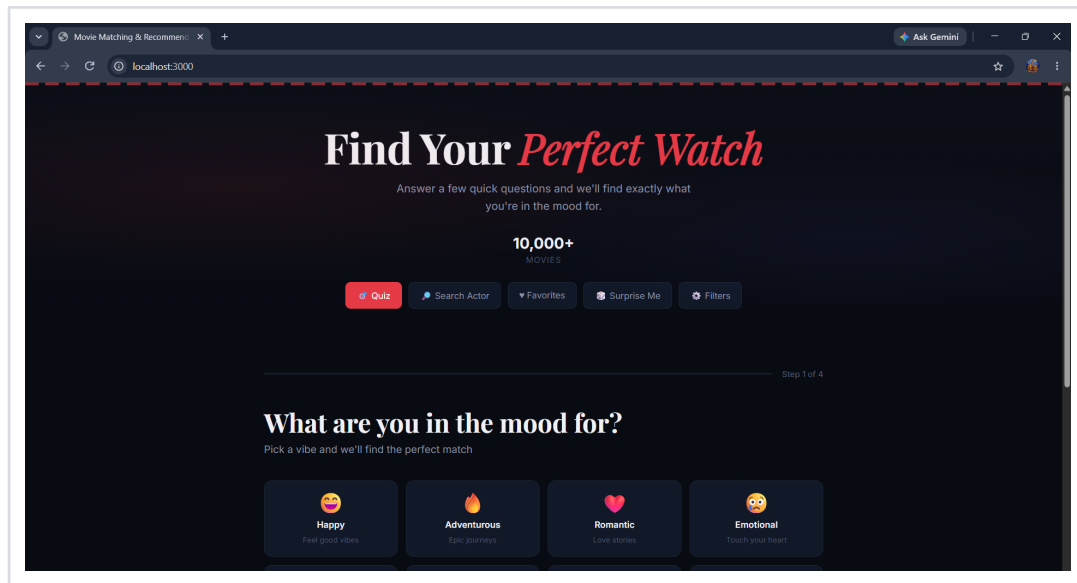

Screenshot Walkthrough

A visual walkthrough of the application's interface, in the order a user would actually move through the app.

Repository: github.com/AdityaTiwari1999/movie-recommender

1 / 8

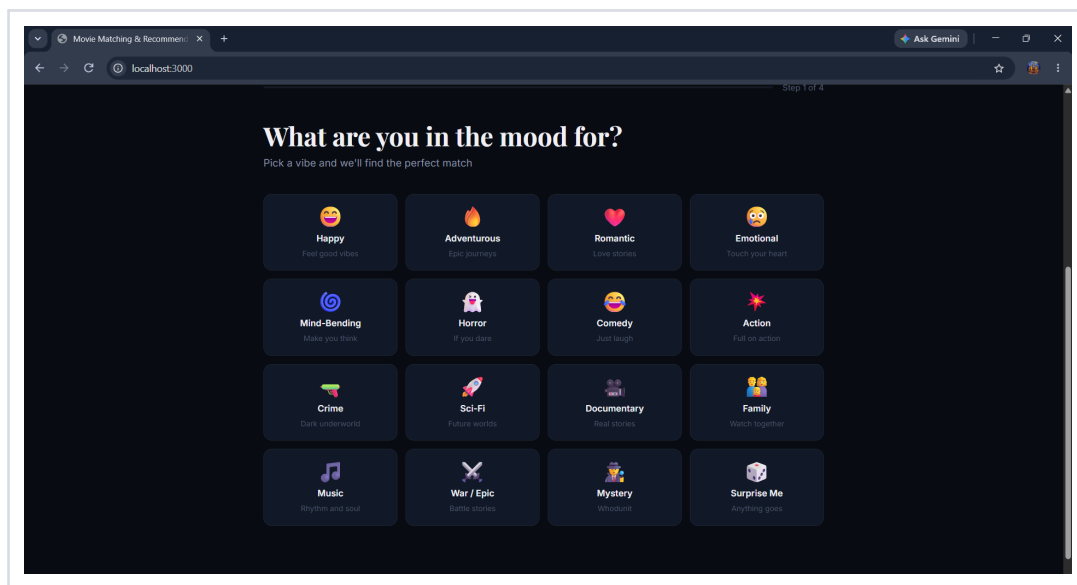

Landing Page

The home screen where the app loads, showing the movie catalog size and the main navigation: Quiz, Search Actor, Favorites, Surprise Me, and Filters.

2 / 8

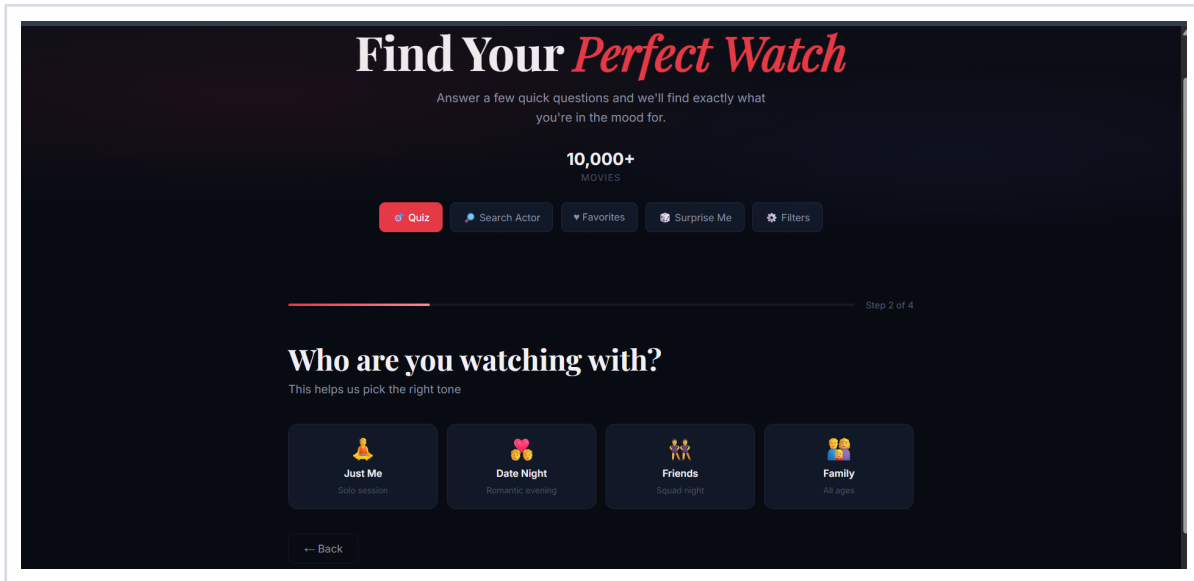

Mood Selection

First quiz question — the user picks a mood or vibe from 16 categories like Happy, Adventurous, Horror, and Comedy to guide the recommendation.

3 / 8

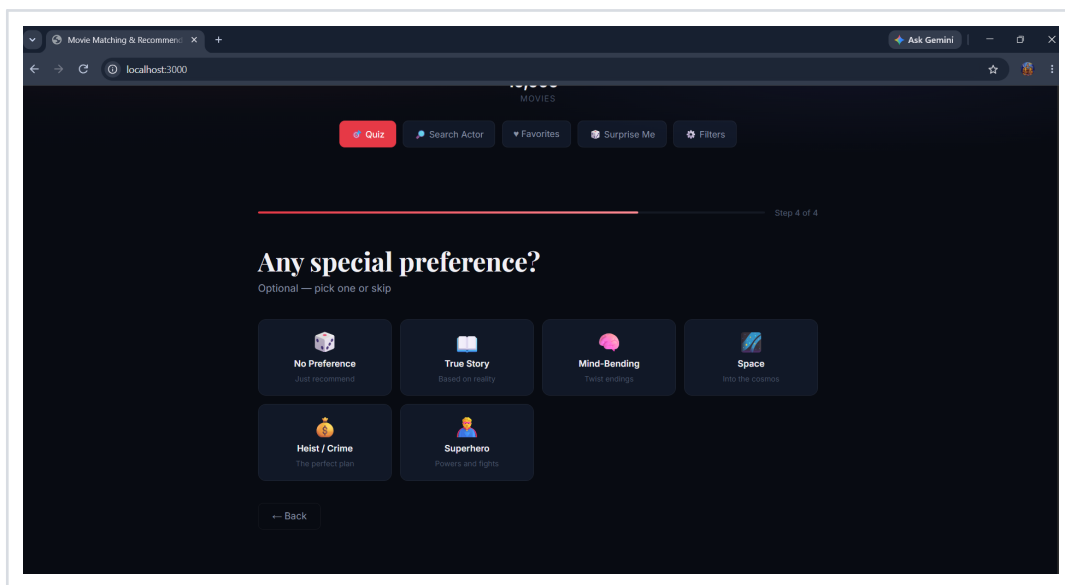

Viewing Company

Second quiz question — the user selects who they're watching with (Just Me, Date Night, Friends, Family) to help set the right tone.

4 / 8

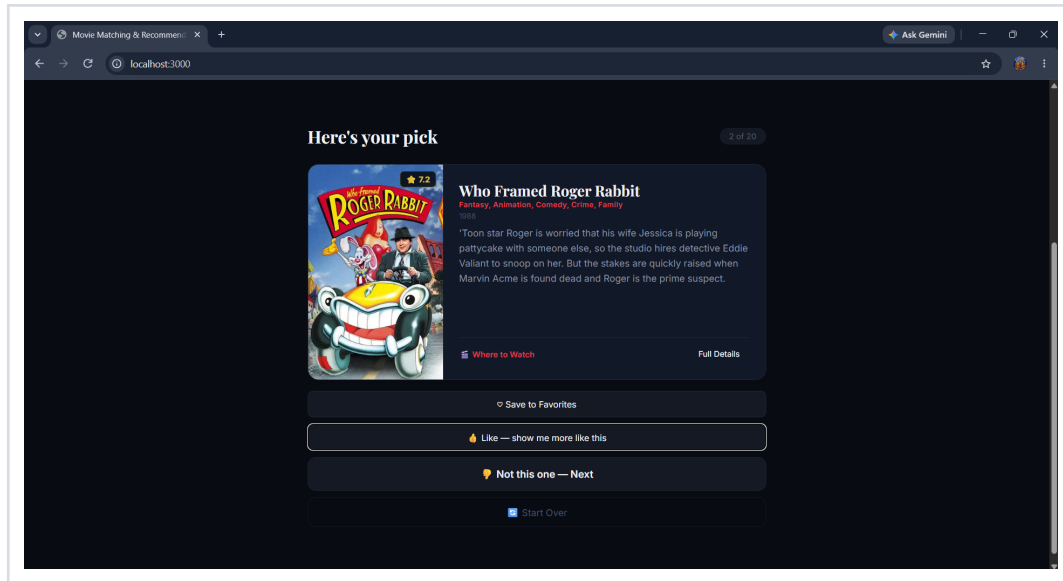

Special Preference

Final quiz question — an optional extra filter like True Story, Mind-Bending, or Superhero, or the user can skip with No Preference.

5 / 8

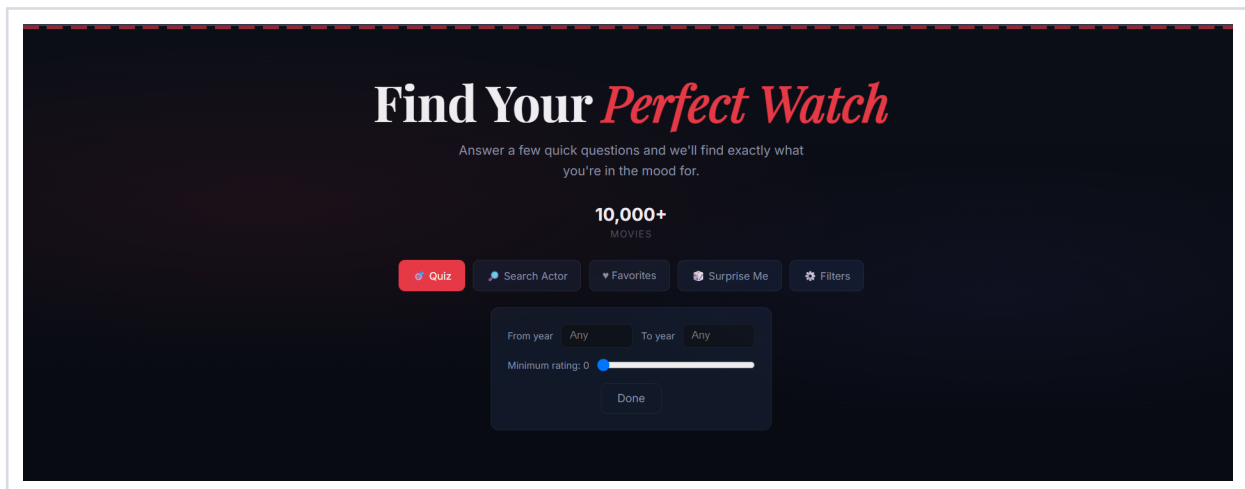

Recommendation Result

The recommended movie based on the quiz answers, shown with poster, rating, genres, and synopsis, plus actions to save, get similar picks, or skip.

6 / 8

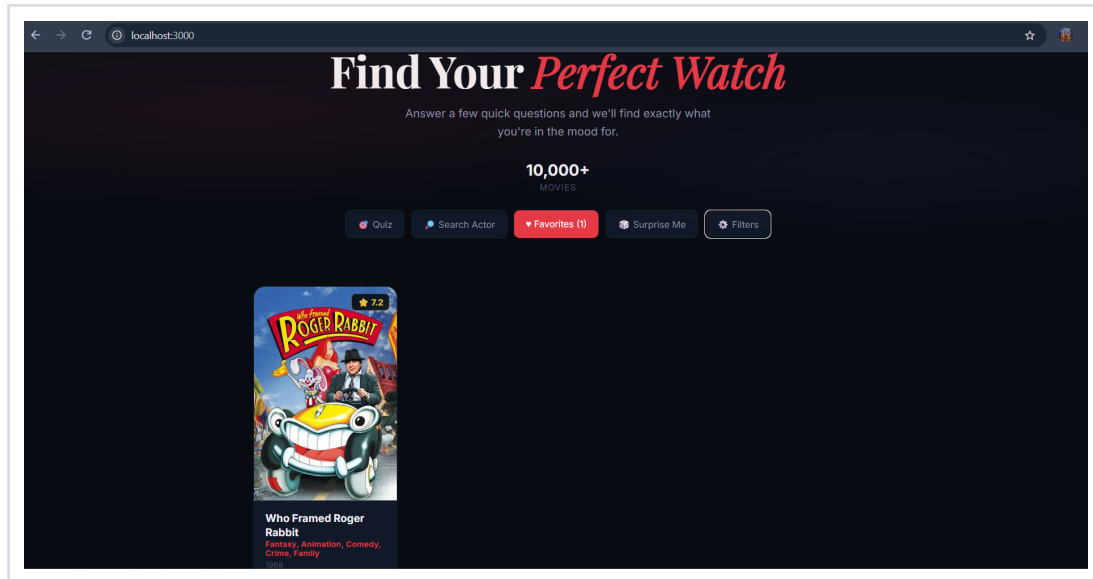

Filters

A quicker path outside the quiz — lets the user narrow movies directly by release year range and minimum rating.

7 / 8

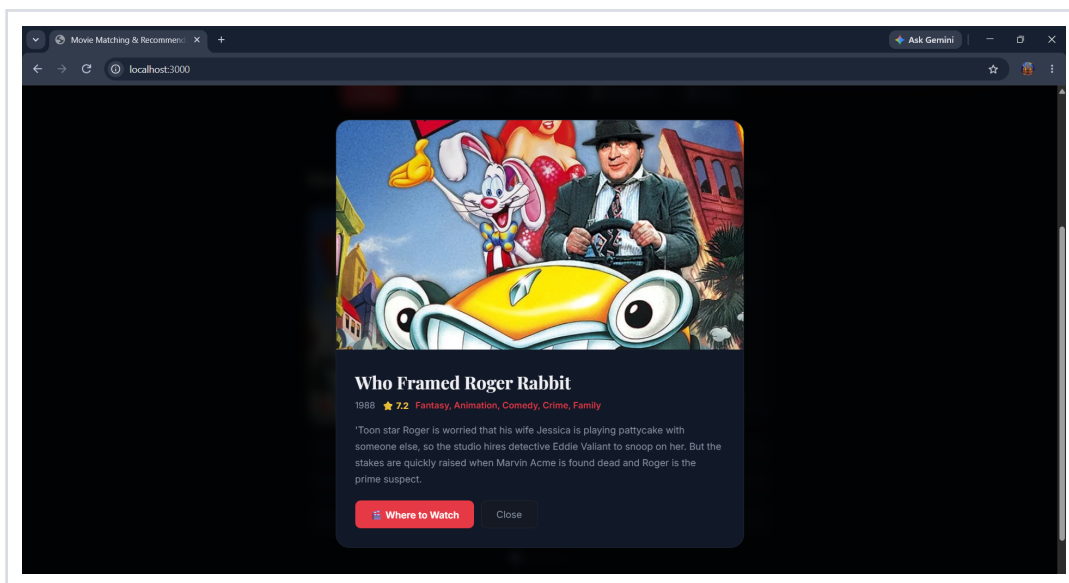

Favorites

Movies the user has saved, kept in the browser so the list stays even after a page reload, with no account needed.

8 / 8

Movie Detail View

An expanded view of a selected movie with full poster, synopsis, and a "Where to Watch" action.
